DID YOU KNOW?

TNBC

Triple-negative breast cancer (TNBC) does not have the three receptors that are commonly found in breast cancer and are often used as starting points for treatment:

- **Estrogen**
- **Progesterone**
- **HER2 protein**

Because these receptors are absent, TNBC can be more difficult to treat than some other types of breast cancer.

*Disproportionately affects **Black and Hispanic women.***

*Has the **highest risk** of reoccurrence.*

*Has the **lowest** breast cancer **survival rate.***

*Is more commonly found in **women under 40.***

*Accounts for **10-15%** of all breast cancer cases. That's nearly **48,000** cases each year.*

*Is a **more aggressive** type of breast cancer.*

EARLY DETECTION MATTERS!

Share the facts and save a life.
